Digital I/O Board with Opto-Isolation for PCI PIO-16/16B(PCI)H

* Specifications, color and design of the products are subject to change without notice.

This product is a PCI bus-compliant interface board for input/output of digital signals. This product can input and output digital signals at 12 - 24VDC.

PIO-16/16B(PCI)H features 16 opto-coupler isolated inputs and 16 opto-coupler isolated open-collector outputs. You can use all of input signals as interrupt inputs. In addition, this product is equipped with a power supply for driving opto-couplers (12 VDC), digital filtering, and output transistor protection circuits (surge voltage and overcurrent protection).

Windows/Linux device driver is supported with this product.

- * The information in the data sheets is as of August, 2023.

Features

Opto-coupler isolated input (supporting current sink output) and opto-coupler isolated open-collector output (current sink type) PIO-16/16B(PCI)H has the 16ch of opto-coupler isolated input (supporting current sink output) and 16ch of opto-coupler isolated open-collector output (current sink type) whose response time is 200µsec. Common terminal provided per 16channels, capable of supporting a different external power supply.

Opto-coupler bus isolation

As the PCI bus (PC) is isolated from the input and output interfaces by opto-couplers, this product has excellent noise performance.

Power for opto-coupler operation (12VDC 240mA) supplied internally As the power to run the opto-couplers is supplied internally, no external power supply is required. The use of jumpers allows you to decide whether you want to use the internal or external power supply for every 16 points

All input signals can be used as interrupt request signals

You can use all input signals as interrupt request signals and also disable or enable the interrupt in bit units and select the edge of the input signals, at which to generate an interrupt.

Windows/Linux support device driver

Using the device driver API-TOOL makes it possible to create applications of Windows/Linux. In addition, a diagnostic program by which the operations of hardware can be checked is provided.

Equipped with digital filter to prevent wrong recognition of input signals from carrying noise or a chattering

This product has a digital filter to prevent wrong recognition of input signals from carrying noise or a chattering. All input terminals can be added a digital filter, and the setting can be performed by software.

Zener diode for surge voltage protection and the circuit for overcurrent protection.

Zener diodes are connected to the output circuits to protect against surge voltages. In addition, the output circuit, it attaches the overcurrent protection circuit at the output 8-channel unit. The output rating is max. 35VDC, 100mA per channel.

Specifications

Function specification

	Item	Specifications			
Input	Туре	Opto-Isolated Input (for current sinking output) (Negative logic *1)			
	Number of Channels	16ch (All available for interrupts) (One common power supply per 1 channels)			
	Input resistance	4.7kΩ			
	Current required to turn ON	2.0mA or more			
	Current required to turn OFF	0.16mA or less			
	Interrupts	Combine 16 interrupt signals to one interrupt request signal as the INTA. Either rising edge or falling edge of input signal can generate interrupt.			
	Response time	200µsec within			
Output	Туре	Opto-Isolated Open Collector Output (current sinking type) (Negative logic *1)			
	Number of Channels	16ch (One common power supply per 16 channels)			
	Output rated voltage	35VDC (Max.)			
	Output rated current	100mA/channel (Max.)			
	Residual voltage with output on	0.5V or less (Output current ≤ 50mA), 1.0V or less (Output current ≤ 100mA)			
	Surge protector	Zener diode RD47FM(Renesas) or equivalent			
	Response time	200µsec within			
Common	Connecting distance	50m(Typ.) (depending on wiring environment)			
	I/O address	Any 32-byte boundary			
	Interruption level	1 level use			
	Boards in one system	Maximum of 16 boards can be install in a same system.			
	Isolated voltage	500Vrms			
	External circuit power supply	12 - 24VDC (±10%)			
	Internal power	5VDC 240mA (Max.)			
	Power consumption	5VDC 1200mA (Max.) (Using the internal power) 5VDC 300mA (Max.) (Using the External power)			
	PCI bus specification	32bit, 33MHz, Universal key shapes supported *2			
	Dimension (mm)	121.69(L) x 105.68(H) *4*5			
	Weight	150g			

- *1 Data "0" and "1" correspond to the High and Low levels, respectively.
- *2 When the internal power supply is used, the input section consumes a maximum of 42 mA and the output channel switching section consumes a maximum of 20 mA. In this case, therefore, the output current to be supplied from the board is 178 mA.
- *3 This product requires power supply at +5 V from an expansion slot (it does not work on a machine with a +33-V power supply alone).
- *4 The size of board No.7238, No.7238A, and No.7238B is 176.41 (L) x 105.68 (H) mm.
- *5 The size of board No.8756x is 121.69 (L) x 105.68 (H) mm

Installation Environment Requirements

Item	Specifications		
Operating ambient temperature	0 - +50°C		
Operating ambient humidity	10 - 90%RH (No condensation)		
Floating dust particles	Not to be excessive		
Corrosive gases	None		
Standard	VCCI Class A, CE Marking (EMC Directive Class A, RoHS Directive), UKCA		

Support Software

Name	Contents	How to get
Windows Version Digital (/O Driver software API-DIO(WDM)	The Windows device driver is provided as a form of Windows API functions. Various sample programs such as C# and Visual Basic. NET, Visual C++, Python etc. and diagnostic program useful for checking operation is provided.	Download from the CONTEC website *1
Linux Version Digital I/O Driver software API-DIO(LNX)	The Linux device driver is provided as a shared library. The software includes various sample programs such as gcc (C, C++) and Python programs, as well as a configuration tool to configure the device settings.	Download from the CONTEC website *1
Software Development Tool Kits (SDK) and Support Software	In addition to the device drivers, we offer many software programs for using CONTEC devices in an easier manner.	Download from the CONTEC website *2

ports	N.C.	19				ports

Signal name	Description
I-00 - I-17	16 input signal pins. Connect output signals from the external device to these pins.
O-20 - O-37	16 output signal pins. Connect these pins to the input signal pins of the external device.
P0	When the external power supply is selected, its positive side is connected to this pin. When the internal power supply is used, this pin output power at +12 V. This pin is common to 16 input signal pins.
P1	When the external power supply is selected, its positive side is connected to this pin. When the internal power supply is used, this pin output power at +12 V. This pin is common to 16 output signal pins.
N0	When the external power supply is selected, its negative side is connected to this pin. When the internal power supply is selected, this pin serves as the ground. This pin is common to 16 input signal pins.
N1	When the external power supply is selected, its negative side is connected to this pin. When the internal power supply is selected, this pin serves as the ground. This pin is common to 16 output signal pins.
N.C.	This pin is left unconnected.

⚠ CAUTION .

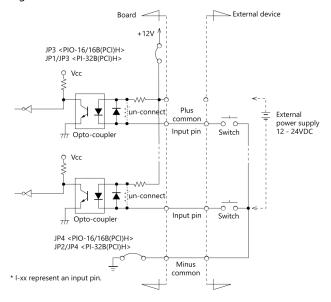

To perform input/output using this product with the CONTEC device driver, specify logical ports and logical bits when calling each function. For details, refer to the "Relationships between API-TOOL Logical Ports/Bits and Connector Signal Pins" of Reference Manual.

Connecting Input and Output Signal

Input Circuit

Connect the input signals to a device which can be current-driven, such as a switch or transistor output device.

The product inputs the ON/OFF state of the current-driven device as a digital value.

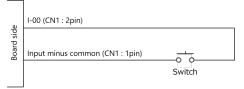

The input circuits of interface blocks of the product are illustrated in the figure above.

The signal inputs are isolated by opto-couplers (ready to accept current sinking output signals). This product therefore requires the on-board internal power supply or the external power supply to drive the input section of this product. The power requirement for each input pin is about 5.1 mA at 24 VDC (about 2.6 mA at 12 VDC).

⚠ CAUTION

Please refer to "Supply power setting jumper" and choose the proper supply by jumpers.

Connecting a Switch (An Example to use Input I-00)

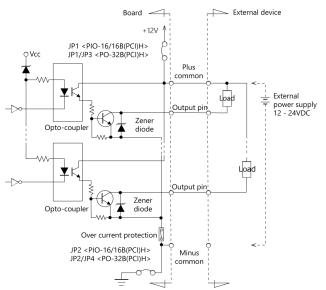

When the switch is ON, the corresponding bit contains 1. When the switch is OFF, by contrast, the bit contains 0.

Output Circuit

Connect the output signals to a current-driven controlled device such as a relay or LED.

The product controls turning on/off the current-driven controlled device using a digital value.

^{*} O-xx represent an output pin.

The output circuits of interface blocks of the product are illustrated in the figure above.

The signal output section is an opto-coupler isolated, open-collector output (current sink type).

This product therefore requires the on-board internal power supply or the external power supply to drive the output section of this product.

The rated output current per channel is 100mA at maximum.

The output section can also be connected to a TTL level input as it uses a low-saturated transistor for output.

The residual voltage (low-level voltage) between the collector and emitter with the output on is 0.5V or less at an output current within 50mA or at most 1.0V at an output current within 100mA.

A zener diode is connected to the output transistor for protection from surge voltages.

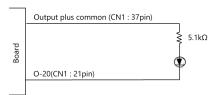

An overcurrent protection component is provided for every 8 output transistors.

When the PC is turned on, all outputs are reset to OFF.

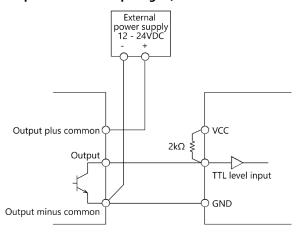

Please refer to "Supply power setting jumper" of Reference Manual and choose the proper supply by jumpers.

Connection to the LED (An Example to use Output O-20)

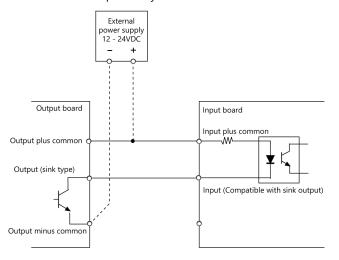

When "1" is output to arelevant bit, the corresponding LED comes on. When "0" is output to the bit, in contrast, the LED goes out.

Example of Connection to TTL Level Input (Connection Example of Output and TTL level Input Signal)

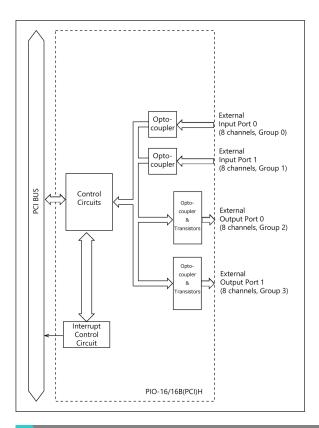

Connecting the Sink Type Output and Sink Output Support Input

The following example shows a connection between a sink type output (output board) and a sink output support input (input board). Refer to this connection example when you connect such boards to each other.

Block Diagram

Differences from Conventional Products

Differences in board dimensions of PIO-16/16B(PCI)H

The board dimensions of PIO-16/16B(PCI)H differ depending on board number. There is no change in electrical specifications other than board dimensions.

(1) Different in board dimensions

No.7238x : 176.41(L) x 105.68(H) mm No.8756x : 121.69(L) x 105.68(H) mm

Differences between the PIO-16/16B(PCI)H No.7238x and PIO-16/16B(PCI)

The PIO-16/16B(PCI)H is connector-pin compatible with the conventional PIO-16/16B(PCI) but has the following differences from it:

(1) Different in the number of input signals available to interrupt requests

PIO-16/16B(PCI)H : All of 16 channels PIO-16/16B(PCI) : 4 channels

(2) Different in the expression to calculate the digital filter time (n: setting value)

PIO-16/16B(PCI)H : 2ⁿ / (8 x 10⁶) PIO-16/16B(PCI) : 2ⁿ / (16 x 10⁶)

(3) Protective elements provided for outputs

PIO-16/16B(PCI)H : Surge protector: Zener diode

PIO-16/16B(PCI) : Nothing

(4) Different in interrupt level resource allocation

PIO-16/16B(PCI)H : Automatically allocates on interrupt level. PIO-16/16B(PCI) : Uses a jumper switch to select whether to

allocate interrupt levels.

(5) The external dimensions of the board differ. PIO-16/16B(PCI)H : 121.69(L) x 105.68(H) mm PIO-16/16B(PCI) : 176.41(L) x 106.68(H) mm

■ PIO-16/16B(PCI)H ■ 5
