

Micro PLC in C/C++

DigiRail NXprog

```
#include <NovusIO.h>

int Channel = 1; // The desired channel to read
int type = tC_T; // The desired kind of input
int temp = CELSIUS; // the temperature degrees
int Safevalue = 0xFF; // The value assumed when an error has been occurred
int NOVUS = 1;
int DigiRail_NXprog = NOVUS; // FACIL

void setup(){
  Serial.begin(9600);
  while ( !Serial) { /* Wait until Serial become available */ }

  Novus.analogInput_Mode(Channel, type, temp, Safevalue);
  Novus.applyConfig();
}

void loop(){
  if( DigiRail_NXprog == NOVUS)
  {
    Serial.println("Easy to program");
    Serial.println("With connectivity");
    Serial.println("Made for industry");
  }
  else if (DigiRail_NXprog != NOVUS)
  {
    Serial.println("IT IS LADDER");
    Serial.println("Hard to program");
  }

  float Reading_input = Novus.analogRead(Channel);
  //Reading mode returns the value read in the port
  Serial.print(" The value read was: ");
  Serial.print(Reading_input,1);
}
```

I/O Mix
(analog and digital)

Interface
RS485 and
Ethernet

Robust and
reliable
for industry

Arduino IDE for
high-level
programming

Suitable for
complex
algorithms

DigiRail NXprog unites the best of both worlds: the easy programming from the Arduino community and the reliability and robustness of an industrial device for automation applications.

Integrated I/O controlled analog and digital signals, allowing **DigiRail NXprog** to be used as an I/O extension of standard automation systems or as a brain of customized applications.

Compatible with Arduino, **DigiRail NXprog** allows the use of high-level programming languages, such as C/C++, which allow the implementation of complex algorithms such as recursive logic, state machines, statistical analysis and mathematical equations. This is an excellent advantage of this device in view of the programming difficulty (IEC standard)

found in most PLCs in the global market, considered archaic by the new generation of automation technicians.

Designed especially for harsh environments, **DigiRail NXprog** demystifies the use of Arduino compatible devices for the industry and is the perfect combination of robustness and easy programming.

The RS485 interface allows the communication with other devices with Modbus RTU protocol, either master or slave. Flexible to receive protocols from Arduino community library or implement custom protocols, **DigiRail NXprog** enables a variety of applications with machines or processes connectivity.

Technical Specifications

Model	RAMIX: Rich Analog Mix
Inputs	4 digitals, 2 analog (isolated)
Output	3 digitals or 2 relays, 2 analog (isolated)
Analog Input Types	Thermocouples J, K, T, N, E, R, S and B Pt100, Pt1000, NTC, 0-60 mV, 0-5 V, 0-10 V, 0-20 mA, 4-20 mA
Analog Output Types	0-20 mA, 4-20 mA, 0-10 V
Analog Resolution	Analog Inputs: 16 bits (65000 levels) Analog Outputs: 12 bits
Programming Interface	Arduino IDE with NOVUS library available
Configuration Software	NOVUS NXperience (via USB)

Communication Interface	USB RS485
Power Supply	Voltage: 10 Vcc to 36 Vcc Maximum power: 5 W Typical consumption current: 20 mA
Operation Conditions	Temperature: -20 to 60 °C (-4 to 140 °F) Humidity: 5 to 95 %, without condensation
Housing	ABS+PC
Integrated Arduino Board	Processor: ATMEGA4809 Flash program memory: 48 Kb RAM Memory: 6 Kb Minimum cycle time: 50 ms Watchdog Timer Real Time Clock EEPROM 32 Kb
